

TERACAI® GREEN IT

You know better than anyone that managing your IT network can be a pretty complex process. And often, some of the biggest hassles come from problems that you never saw coming. One of these problems is the issue of IT asset disposal. The task of implementing new IT equipment often overshadows the equally important task of disposing of your unwanted IT assets. That is, until they start piling up in your closet.

With recent increases in government rules and regulations regarding data destruction and cleansing, environmentally friendly directives to increase e-waste recycling, and the inherent risks of improper data destruction, it's not uncommon to look at IT asset disposal and see nothing but time, money and headaches. Fortunately with TERACAI™ and our Green IT offerings, relief is quick, easy and affordable.

We offer a number of solutions and services for end of life IT assets. Each of them is simple, safe and, of course, green. It's all part of TERACAI's proven commitment to delivering peace of mind – and in this case, a little extra closet space.

ASSET PICK UP

For unwanted IT assets totaling 1000 lbs. or more, disposal poses a bit more of a challenge. TERACAI is up for the task. No matter where you are in the United States, we'll pick up your old assets by the truckload and get them to one of our certified facilities across the country where they'll be safely destroyed.

DATA DESTRUCTION

We understand the importance of making sure that your sensitive data is properly destroyed. That's why we thoroughly destroy your data in accordance with all government and environmental standards. Simply put, your data is destroyed and your peace of mind, established.

SECURE DATA DESTRUCTION

To ensure maximum security, we'll destroy your data in a secure environment that is monitored by video surveillance throughout the entire process. This includes degaussing and hard drive shredding.

DEGAUSSING

Through degaussing, magnetic media are rendered completely unusable and by damaging the storage system. We can perform degaussing on certain forms of computer data storage, such as hard drives and tape back-up drives.

HARD DRIVE SHREDDING

Did you know that there are still ways to remove sensitive information from a hard drive even after it has been rendered inoperable? We certainly do. That's why we offer hard drive shredding, in which your devices, and consequently, your data are physically destroyed.

LOGISTICS SERVICES

Our experienced team will come to your business to sort your unwanted IT assets for you, organize a pick-up and follow through with the necessary data destruction or asset recycling processes. Basically, we'll focus on your unwanted IT assets so you have time to focus on your business.

NEED A SIMPLER IT ASSET DISPOSAL SOLUTION? WE DELIVER.

As unwanted IT assets begin to pile up, e-waste problems become increasingly difficult to ignore. Fortunately, with Green Cube®, they're an easy problem to solve. Perfect for smaller quantities of equipment, the Green Cube recycling container lets you load up to 1000 lbs. of e-waste, including computers, monitors*, printers, telephone gear, fax machines, network gear, servers and PoS equipment in a single box!

Green Cube arrives at your office in 3-5 business days and comes in two convenient sizes. And best of all, one price covers everything – delivery, shipping and recycling.* Once the process is complete, you'll receive a certificate of recycling and data destruction for the equipment you send us to ensure asset security.

Using Green Cube boils down to a simple 3-Step Process:

1. We'll send you a box
2. You pack it with your electronics surplus
3. You send the box back

**All in all, it's just one box,
three easy steps, and
endless peace of mind.
Get your Green Cube today!**
